

LMF Heatless Desiccant Air Dryers

LMF LMDA series

Heatless Desiccant Air Dryers

LMF LMDA Heatless Desiccant Air Dryers provide constant -40°C (-70°C Optional) pressure dew point. These dryers are designed to supply clean and very dry compressed air for critical applications. Pre-filters and after-filters are standard on all LMF Heatless Air Dryers to keep the air stream clean and maintain the integrity of the desiccant medium. A very reliable electronic controller is design so the dryer operates perfectly through the service life of the dryer. LMDA Heatless Desiccant Dryers are equipped with special valves and high quality desiccants in order to assure performance and provide the lowest pressure drops available in the market.

Principle of Operation

The twin tower design allows for continuous adsorption of water vapor from compressed air by using the hygroscopic desiccant with high crush strength and a high surface / volume ratio. Drying is accomplished by passing compressed air through one desiccant bed adsorbing moisture while the other is being simultaneously regenerated with the expanded purge air. Regeneration of desiccant is accomplished without the use of heat. The wet bed is dried by diverting a small portion of the super - dry air from the outlet at near atmospheric pressure. The purge flow rate is adjustable to suit the specific outlet conditions (desired dewpoint) The super dry air flows in a counter direction through the wet bed, sweeping all the water vapour previously absorbed by the desiccant. LMDA ensures pressure equalization in the twin towers prior to switching. This prevents line surge and minimizes desiccant attrition. The tower being reactivated will be gradually re-pressurized at the end of its reactivation cycle before switch over take place. Purge flow and de-pressurization are in downward direction, counter flow to the drying air flow.

PLC is standard

LMDA Desiccant Dryers has an extremely reliable electronic controller for optimal performance over the lifetime of the dryers. Touch screen PLC is capable of showing the cycles as well as the valves which operate in real time. This is also capable of showing dewpoint. User friendly multi-lingual PLC. PLC helps the end users understand the operation system and issues easily.

Activated Alumina

In order to achieve consistent dewpoint, LMF uses a mixture of adsorption media in its heatless range of desiccant dryers. Activated Alumina, Molecular Sieve and Silica Gel are used in varying ratios depending on the application.

Technical Specifications

Model	Connection Size	Inlet Flow Rate		Voltage	Max. working pressure (bar)	Pressure Drop (mbar)	Total Weight (Packed) (Kg)	Active Alumina (Kg)	Dimensions (mm)		
		(m³/h)	(scfm)						Length	Width	Height

EFFICIENCY RATING	X PRE FILTER	Y PRE FILTER	P AFTER FILTER	For special requirements please contact our Technical Department
	1 micron particle removal and 0.5 mg/m³ oil removal	0.01 micron particle removal and 0.01 mg/m³ oil removal	5 micron particle removal (Removes desiccant particles after the dryer)	

Correction Factor

(Bar)	4.5	5	6	7	8	9	10
Factor Pressure F1	0.69	0.75	0.88	1	1.12	1.25	1.37
Inlet Temperature (°C)	20	25	30	35	40	45	50
Factor Inlet F2	1	1	1	1	0.80	0.73	0.59

All desiccant dryers are designed according to Pneurop conditions as per ISO7183

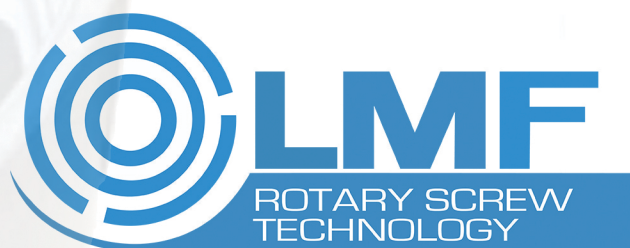

Pressure dewpoint	-40 °C / -70 °C (optional)
Nominal inlet temperature	35 °C
Nominal working pressure	7 bar
Maximum inlet temperature	50 °C
Maximum working pressure	10 bar
Maximum ambient temperature	50 °C

ORDERING :

If a compressor delivers 850 Nm³/h at 9 barg pressure and 45°C inlet temperatures please choose your dryer as follows; $850/1.25/0.73 = 931 \text{ Nm}^3/\text{h}$
The correct Dryer for this is MDA1000

LMFLMDA Heatless Desiccant Air Dryers provide constant -40 °C (-70 °C is optional) pressure dew point. These dryers are designed to supply clean and dry compressed air for critical applications. As pre and after-filters are supplied along with LMF Heatless Air Dryers to keep the air stream clean and maintain the integrity of the desiccant medium.
